Unchanged legacy NASA data — direct closed-volume H2/air source, 10 us
Crossing discrepancy persists
Absolute relative source energy change
Declared ODE relative tolerance
Native, T0=999 K
Cantera, T0=999 K
Original source-energy gate
Jump diagnostic and branch controls
Native crossing minus jump
Cantera, T0=1001 K
Cantera, T0=1100 K
Native crossing concentrations use 1000 diagnostic intervals. Jump interpolation is approximate; solver tolerance norms differ.
