Known chemistry thermal paths — homogeneous H2/air at 240 us
Closed-volume endpoint
Temperature difference (K)
CV source, baseline
CV source + G
Matched CP source + G
Reference tolerance contrast
CFD timestep (us)
Final CFD conservation
Absolute relative energy drift
CFD timestep (us)
Local source invariant
Max relative source energy change
CFD timestep (us)
Corrected autonomous ODE callback. Agreement below the reference contrast is not a resolved order estimate.
