Inviscid H2 kernel at 240 us: reference uncertainty remains
Numerical differences, not exact errors. Bottom: solid vs central; dashed vs HLLC.
Finest executed reference profiles
central, nx=512
hllc, nx=512
none, nx=128
conservativeState, nx=128
blockConservative, nx=128
Temperature (K)
Position (mm)
Finest executed reference profiles
H2O mass fraction
Position (mm)
Finest executed reference profiles
Velocity x (m/s)
Position (mm)
Conservative restriction; numerical differences
Temperature L1 difference (K)
Pressure-method cells
Conservative restriction; numerical differences
H2O L1 difference
Pressure-method cells
Conservative restriction; numerical differences
Velocity L1 difference (m/s)
